EDUCATION

Arizona State University Master of Science in Computer Science GPA: 4.0/4.0	Tempe, Arizona Aug. 2024 - May 2026
Relevant Coursework - Natural Language Processing, Semantic Web Mining, Statistical Machine Learning, Data Mining, Cloud Computing, Data-intensive systems for ML, Data Visualization	
Vellore Institute of Technology, Vellore Bachelor's in Computer Science GPA: 9.29/10 Merit Scholarship Recipient (Top 10 rank)	Vellore, India Jul. 2018 - May 2022

WORK EXPERIENCE

Wells Fargo Gen AI Intern, Quantitative Analytics Program	Charlotte, NC June 2025 - Aug. 2025
- Built a POC Generative AI Question Answering system using customer data, providing bankers with accurate context-aware insights and reducing client preparation time by ~30% in pilot testing. - Designed an LLM evaluation framework using DeepEval and DSPy, implementing HITL, LLM-as-a-judge, and adversarial testing to benchmark model reliability, alignment, and safety across projects. - Tested a hybrid RAG pipeline (BM25 + FAISS) that reduced retrieval latency by ~85% by replacing long-context large-model prompting with targeted chunk retrieval and smaller models.	
Bajaj Finance Limited Data Scientist	Pune, India Jul. 2022 - Jul. 2024
- Led development and deployment of ML-based Customer Churn Prediction model on the Bajaj Finserv App (40M+ users), driving a 3.8% retention lift through targeted strategies. - Built a Notification Recommendation Engine using sequence modeling on clickstream data that boosted notification click-through rates by 25%, directly improving business leads, journey completions, and conversions. - Pioneered MLOps adoption by implementing MLflow in Databricks, cutting manual deployment effort by 50%, standardizing A/B testing, and enabling adoption by 3+ teams.	
Bajaj Finance Limited Data Science Intern	Pune, India Jan. 2022 - Jul. 2022
- Automated forecasting pipelines using Pandas and PySpark, cutting monthly reporting time for app metrics (MAU, DAU, traffic, and net users) from 5–6 days in Excel to 1 day. - Analyzed app notifications and uninstallation patterns using tree-based models, guiding informed governance changes that reduced churn and notification costs.	

SKILLS

Programming: Python, SQL, Pyspark, C++, NumPy, Pandas

AI/ML: Statistics, Predictive Modeling, Time Series, Deep Learning, NLP, LLMs, MLOps, Prompt Engineering, Fine-tuning & Alignment, Retrieval Augmented Generation (RAG), Agentic Workflows, LLM Evaluation & Safety

Frameworks/Tools: TensorFlow, Hugging Face, LangChain, Vector Databases, DeepEval, DSPy, scikit-learn, streamlit

Certifications :

- Technical:** Generative AI with LLMs, TensorFlow Developer Professional Certificate (DeepLearning.AI, 2023-2024)
- Professional:** Dale Carnegie Program on Training Excellence (Dale Carnegie & Associates, Inc., Mar. 2024)

PROJECTS

Identifying LLM Performance Gaps Across Languages Research Project at ASU
- Evaluated multilingual performance gaps in LLMs using OLMo models across 100+ languages and 5 reasoning domains (Math, Reasoning, NLI, Common sense, healthcare) using high-quality translation pipelines. - Quantified correlation between structural factors (language-token exposure, parallel data, script effects) in pre-training/post-training data and cross-lingual accuracy to guide fairer LLM development.
ClickLess AI: Autonomous Grocery Shopping Agent
- Built a conversational AI agent that converts natural language into checkout-ready grocery carts using Instacart API, Knowledge Graphs, and LLM orchestration with automated checkout via BrowserUse and Playwright. - Integrated Open Food Facts for dietary constraint satisfaction, with privacy-preserving on-device inference.

AWARDS AND EXTRACURRICULAR

Runner-up , Visual AI Hackathon by Voxel51 - built a Hazard Zone Monitoring system using YOLOv8	Feb. 2025
Certified Corporate Trainer , Bajaj Finance - delivered technical training sessions to employees	Mar. 2024
Received HEROES Award for exceptional performance at Bajaj Finance Limited	Jan. 2023
Finalist , Code For Good hackathon by JP Morgan Chase & Co.	Jun. 2022
